3rd Annual
Grant Showcase
March 26, 2019

Featuring
Innovative Teaching Grants at
Cypress Grove Intermediate
Wellborn Middle School
South Knoll Elementary

presented by the
College Station ISD Education Foundation

Cypress Grove Intermediate

Cats Coffee Cart - Kristin Lehmann

Students with special needs learn valuable academic, social and customer service skills as they manage the Coffee Cart. These young workers-in-training practice vocational skills as they sell coffee to teachers every Friday, and they build campus connections for students and faculty. The grant award of \$420 brews encouragement for 20 students per year.

Drum Together - Marla Goodwin

Music comes to life for 5th and 6th grade students as they perform, collaborate and practice rhythms using Remo Key Tuned Tubanos. This drum set improves the understanding of rhythm, performance skills and musical interaction between students. Musicians learn through drum circles, rhythm games, drumming ensembles, call and response activities, music reading and concerts. The grant award of \$180 drums up success for 200 students per year for more than 10 years.

Wellborn Middle School

Virtual Reality Goggles - Fey Hysmith

Google VR Goggles take students on virtual expeditions around the world and across the universe. Young researchers can explore the inside of a cell or travel back in time to the Texas pioneer prairie. These virtual field trips engage students in the world beyond their normal scope, and excite them about science and social studies. The grant award of \$9,800 provides a virtual passport for 630 students per year and can be used for multiple years.

LEADS Ambassadors - Chad Lehmann & Jill Butler

Students build leadership skills and management abilities as they develop community service projects. LEADS Ambassadors participate in a year-long program as they attend seminars, team-building activities and field trips. The grant award of \$3,500 supports 45 student leaders at 8 campuses, as well as 16 teachers and 100 volunteers.

South Knoll Elementary

Catch a Voice - Gaby Moon

First graders launch into learning with the Qball wireless throwable microphone. Utilizing technology and movement, the Qball motivates young learners to participate, share and collaborate in classroom and small group discussions. The grant award of \$1,100 catches 125 students per year, and can be used in all curriculum areas.

We Do - Jeannie Carter

Who loves STEM? We do! Students use the Lego WeDo Set to conduct research, design and build a moving robot, solve a real-world problem, and compete at the annual Jr. Lego Expo. The project is a highly motivating and hands-on practice of science, technology, engineering and coding, as well as public speaking and collaboration. The grant award of \$1,200 excites 45 GT students per year, and can be used for multiple years.

Please join us for lunch
following the tours in the
College Station ISD board room.
